20	Try to Break the app and fix any bugs found	Requirement Name		Requirement Description	Acceptance Criteria
		Application Robustness and Bug Fixing		The BusyBee application must undergo extensive robustness testing to ensure its stability and usability when faced with edge cases, unexpected user behavior, and varying operational conditions. Any bugs discovered during this testing must be logged, categorized by severity, and resolved within the timeline specified in the Sprint goals.	1. <b>Functional Edge Cases:</b> Test boundary values, invalid data, and simultaneous user interactions. 2. <b>Performance Edge Cases:</b> Evaluate performance under stress (e.g., large datasets) and rapid navigation. 3. <b>UI/UX Consistency:</b> Ensure responsiveness and resolve UI glitches for varying resolutions. 4. <b>System Behavior:</b> Test for network interruptions, low memory, and high CPU usage. 5. <b>Bug Tracking:</b> Log, categorize, and resolve all issues, prioritizing critical bugs before the Sprint ends.
21	Implement theme settings so users can choose between different color schemes (light and dark mode)				
22	Have all windows, buttons, and text resize dynamically to fit the window size in a visually appealing way				
23	Implement drag and drop reordering of tasks	<div><div><input type="radio"/> Appointment</div><div><input type="radio"/> Test</div><div><input type="radio"/> Project</div><div><input checked="" type="radio"/> HW Random</div><div><input type="radio"/> Random</div></div>			
24	Finish implementing the daily view to be able to pull events from the database, add and edit events
